

ENVIRONMENTAL SOLUTIONS AND ENGINEERING

Environmental management and engineering for projects that move forward

We design, process, and monitor the environmental compliance of your project, coordinating engineering, fieldwork, and regulatory management in a single process.

INDUSTRY MINING CONSTRUCTION

// 01 – WHY NK

Our expertise

FOLLOW-UP

Ongoing regulatory compliance

We provide continuous follow-up on the project's environmental and sector-specific requirements at every stage.

COORDINATION

Integrated engineering, fieldwork and management

We coordinate technical design, field monitoring, and regulatory management as a single process.

COVERAGE

Presence in demanding technical sectors

Industry, mining, and construction — sectors with high technical and regulatory standards.

// 02 – BUSINESS LINES

Business lines

N.01

Environmental Management and Regulatory Compliance

- Design and preparation of environmental and sector-specific permitting instruments
- Monitoring of environmental commitments and requirements

- Analysis of operational gaps and regulatory risks
- Environmental Technical Inspection of Works (ITO)
- Consulting on quality, environmental, and energy efficiency management systems

N.02

Engineering, Permits and Regularizations

- Sector-specific permit management
- Regularization before the relevant authorities

- Baseline studies

N.03

Environmental and permitting due diligence

We assess the environmental and regulatory status of an asset or project, providing a clear technical basis for purchase, lease, or financing decisions.

- Review of environmental liabilities and compliance history
- Identification of regulatory gaps and associated risks
- Verification of the validity and scope of sector permits
- Executive report to support decision-making

// 03 – TECHNICAL CAPABILITY

Technical studies and analysis

Noise and vibration

Environmental noise monitoring (D.S. 38 MMA), occupational noise (D.S. 594 MINSAL), fauna-component noise (SEA-MMA), underwater noise, illuminance and vibration monitoring.

Air quality

PM10, PM2.5, PM1 and TSP (DS 61/2008), settleable particulate matter, process gas monitoring, on-site meteorology.

Water component

Physicochemical water analysis and hydrogeological monitoring.

Geophysics and fieldwork

VES, ERT, TEM, and SP surveys up to 300 m depth. Exploratory drilling, test pits, soil mechanics, RTK topography, drone surveys, and bathymetry.

Biotic environment

Terrestrial and aquatic flora and fauna surveys with SAG and SUBPESCA-certified consultants, soil biology, and macroinvertebrates.

Social environment

Social risk analysis, social studies, and public participation processes (PAC).

FIELD RECORD – PUCHUNCAVÍ, VALPARAÍSO

Georeferenced, traceable data

Each measurement is recorded and documented on-site, with full traceability for technical and regulatory purposes.

// 04 – WHERE WE WORK

We work where your business operates

// 05 – LET'S TALK

Let's talk about your project

Schedule a free 20-minute conversation to review the environmental management and engineering support your project needs.
